Utilizing HTML, CSS, and JS to create an interactive website, where user's attempt to guess a number. Score is calculated and saved before a new game begins.

[Link to the game's website](#)

Priority Queue • C++

A linked list manipulated to behave like a Queue. The nodes of the list are arranged by levels of priority. [Project Repository](#)

Nonogram Game Generator • Python

Program creates random nonogram game boards using the pygame library, grids, and two-dimensional arrays. [Project Repository](#)

## Work Experience

Warehouse Team Member • Amazon

January 2021 – April 2021

- Responsible for completing grocery orders and keeping the workplace clean
- Communication was important for this position. With about 70 people in the warehouse, we had to make sure everyone could work efficiently.

Office Intern • Assembly Member Clyde Vanel Office

January 2020 – March 2020

- Digital information about the schools in the district was disorganized. The task was to contact the parental advisor of each school and obtain information about their graduating class.
- Organized the information obtained into an excel file. As a result, the office was able to easily make the diplomas for each school.
